

WHY LIQUEFIED NATURAL GAS?

Liquefied natural gas (LNG) is a cost-effective fuel solution in heavy-duty trucking, marine and rail transportation as well as high-horsepower applications such as drilling, mining and power generation. LNG has a number of significant benefits when compared to petroleum-based fuels, including the fact that LNG is:

ENVIRONMENTALLY FRIENDLY

LNG is a clean burning fuel that produces 30 percent less CO₂ than oil and 50 percent less than coal. Unlike diesel, there is no residue after an LNG spill.

DOMESTICALLY PRODUCED

Approximately 96 percent of the natural gas we use in this country is produced in the U.S.

ABUNDANT IN SUPPLY

Based on current estimates, the U.S. has enough natural gas reserves to meet demand for more than 100 years, making LNG a sustainable alternative fuel. The abundant natural gas supply has led to lower and more stable natural gas prices.

AMERICAN, ABUNDANT, AFFORDABLE.

LNG is a low-cost alternative to diesel and propane, and offers significant long-term benefits to your bottom line. For the next decade and beyond, domestic natural gas supplies are expected to be sufficient to meet growth in demand across all sectors.
